

Supreme

Reshaping the Sterilisation world

- Can perform 50 Sterilisation cycles with only 5 Litres of Tap Water. Utilises a built in demin and recirculation filter so that bottled demin water or external filtration systems are a thing of the past. Saves on water costs and reduce environmental impact.
- Large 7 inch colour touch display. Features simplified navigation, on-screen maintenance and how to videos.
- Coloured LED lights communicate cycle status.
- Near Field Communication cards or wristbands identify and record user details on the sterilisers memory. No touch technology.
- Optional barcode and cycle report printer. Track critical instruments digitally.
- Optional network printer can be used on multiple Supreme sterilisers. Wireless connection.
- Delayed start so Vacuum and Helix tests can be programmed to run before a practice opens. A real time saver.
- Wi-Fi and Ethernet port are standard inclusions so steriliser can be networked.
- User management system allows users to be tracked to cycle data via personal PIN codes. Complies with Australian and NZ standards and means no paper printout is required.
- Cycle data saved as a PDF file, meaning no software required to save data. Can be downloaded to PC via USB included.
- Steriliser can be installed as a stand alone device or connected to mains water or external R/O systems. Multiple options to cover varying installation requirements.
- Built in water conductivity sensor to ensure water quality is always at its best.
- Optional Cloud based software to manage machine performance, cycle data and provide remote access for technical departments.

Industry leading 3 year or 3,000 cycle warranty!
