No Waiting Time

The new original MDP & Amide chemistry provides a unique RAPID BOND TECHNOLOGY. Unlike other universal adhesives, there is no need to wait for it to penetrate the dentin before you proceed.

The new **Amide** monomer rapidly permeates dentin & enamel eliminating waiting time.

The original **MDP** monomer creates a strong chemical bond to hydroxyapatite. MDP has a proven excellence in Adhesion for over 30 years.

RAPID BOND TECHNOLOGY offers consistent, predictable results with all etching procedures & virtually any application time.
